Why Titan Performance Spartan™? Cardarine is the ultimate SARM for endurance and fat loss. It's in a group of androgen receptor (AR) ligands that are tissue selective, created to cure muscle wasting linked with acute and chronic diseases, age-related muscle loss and cancer. GW-501516 (Cardarine) is anticipated to yield the healing benefits of testosterone with better safety, admissibility and patient acceptance due to tissue-selective mechanism of action and its oral form of administering.

HOW TO USE:

Dosing: GW501516 works best if you split it into two daily doses. Try 5 mg, morning and afternoon, for a total of 10 mg a day. Take GW501516 for 4 weeks, then cycle off for at least 4 weeks before starting another round.

Optimum results with a high protein diet.
